DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6-13, 15-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Vento US6394423.

Regarding claims 1 and 10, Vento discloses a live well oxygenator, comprising: a vessel 1, said vessel having an inner chamber enclosed by a front wall, a top wall, wall, two side walls and a bottom (see figure 1B); a first opening 20 disposed through said front wall; water pump (col 6, line 42) positioned said inner chamber, said water pump having an inlet (between elements 10 and 12) positioned at said first opening; a second opening 16 disposed through said front wall; a water return pipe 20 positioned in said inner chamber, said water return pipe having an outlet positioned said second opening; an oxygen feed valve 26 having an inlet 18 opening into said chamber, said oxygen feed valve disposed on said top wall; and an overflow 24 tube positioned in said chamber, said overflow tube communicating with said chamber through said top wall (refer to figure 1).

Regarding claims 2 and 11, Vento discloses the live well oxygenator according to claims 1 and 10, and further including, a discharge pipe 20 connected to said water

Application/Control Number: 10/764,445

Art Unit: 3643

pump, said discharge pipe positioned in said chamber and having an upper portion disposed above said pump (refer again to figure 1).

Regarding claims 3 and 12, Vento discloses the live well oxygenator according to claim 2 and 11, further including a venturi opening (col 5, lines 36-44) disposed said portion of said discharge pipe.

Regarding claims 4 and 13, Vento discloses the well oxygenator according to claims 1 and 11, further including a filter screen (col 9, lines 60-63) positioned over said first opening.

Regarding claim 6, Vento discloses the well oxygenator according claim 1, further including electrical transmission wires 22 connected said water pump and extending through said rear wall.

Regarding claims 7 and 15, Vento discloses the live well oxygenator according claims 1 and 11, wherein said water return pipe has an inlet opening 14 in said chamber, said inlet opening being spaced above said bottom (refer to orientation of opening 14 in figure 1, where it is above the bottom of the chamber, unnumbered) of said chamber.

Regarding claims 8 and 16, Vento discloses the live well oxygenator according to claims 1 and 11, wherein said overflow tube 24 has an open end 28 disposed in said chamber, said open end being spaced above said bottom said chamber (please refer to orientation of parts in figure 3).

Art Unit: 3643

Regarding claims 9 and 17, Vento discloses the live well oxygenator according claims 1 and 11, wherein said vessel has an outer surface and wherein an ayray of mounting tabs is disposed on said outer surface.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vento in view of Morse US3904393.

Regarding claims 5 and 14, Vento discloses the live well oxygenator according to claims 1 and 11, with a second opening 16.

Vento does not disclose a screen over the second opening 16.

Morse discloses a second opening 48 with a filter 58.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the teaching of Morse of a second filter over the second opening to the live well oxygenator of Vento in order to remove impurities from the water and infused air going into the tank.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Balestreieri US5190647; Willinger US3640516; Vento US5582777; Vento US6655663.
